

# Construction of Next-Generation Tax Platform Project

## I. Objective

Improving the local tax services and administrative effectiveness, strengthening information security of the tax platform, and maintaining tax fairness.

## II. Implementation Content

- A. Strengthen the local tax platform system by planning cloud architecture, building a private cloud, and dynamically allocating resources. Establish a local tax database of independent resources.
- B. Concentrate the information of various agencies to provide a comprehensive way of querying tax data by expanding inter-agency data interface.
- C. Constructing proactive tax services: establishing inter-ministerial information operations for the Ministry of Health and Welfare, the Ministry of Communications, and the Ministry of the Interior.
- D. Improve the efficiency of information and communication security management.

## III. Expected Benefits

- A. Use virtualization technology to dynamically and flexibly allocate resources.
- B. Through service process transformation and cross-agency cooperation, integrate service interfaces and simplify standard operating procedures, speeding up various processing times and data exchange between departments.
- C. Strengthen information security and improve data protection mechanism.
